

# Just Enough™, never too much

**CONFIDENTIAL** update 9.30.22 - 4.3.23

**The Legacy Series product family provides an auto or remote-controlled learning method which follows our trademark – *Just Enough™, never too much* - patented learning process**

*The Legacy Series system utilizes animal behavior science ‘Incentive Learning’ techniques in conjunction with ‘non-aversive’ stimuli to guide a dog into a new behavior with the canine learning on its own that indeed their tasks can be achieved smoothly, softly, with no pain, fear, or apprehension rather occurring in a relaxed atmosphere. (Even if or when utilizing Impulse stimulation, the output is offered in the Just Enough™, never too much process.)*

The difference between it and the older methods of electronic training is fundamental: with the Legacy Series, when you give the command, you simultaneously apply pressure onto the hand-held activator button - it measures the pressure applied and always starts at a (0) level and moves linearly upwards to match the dog’s adrenal level or degree of situational distraction, then used to guide the dog to its target, and then upon the dog’s completion of or arrival at the assigned task, the pressure on the hand-held activator button is released and the motivational output reduces downward back to (0) zero. (Based upon this method, the motivational sensation the dog experiences are a non-aversive directional/guidance communication system.)

The timing of this variability of motivational sensation is perfect - when the dog’s activity ceases, the output from the collar unit decreases at a pre-determined rate - the dog intuitively understands that the cessation of this sensation signals to the dog that its activity has been appropriately followed. This completes the **Just Enough™, never too much** sequence.

**We welcome you to join our family!!**
